

New Pavement

Keep Your Project Moving

Asphalt pavement does more than provide the finishing touches to a new construction project; it also helps move people to and from your site. Whether you're opening a retail store, office location, road, public building or other project, your asphalt is a key connection between your new space and the people who will use it.

That's why we are dedicated to professional, high-quality asphalt paving solutions for new build projects, as well as all the pre-phase and post-phase services you need for a complete solution. In fact, we don't consider paving "just a phase" – it's our identity. And it's what allows us to ensure you get the best end product while keeping your overall construction project on track.

Benefits

Our asphalt paving provides a number of benefits – including superior quality and professional service during every step of your project. While other construction companies consider asphalt paving just a "phase" of their overall construction services, asphalt paving is our identity – and we're experienced at every aspect of it.

We can also tailor the thickness and makeup of your pavement according to its size and the amount of expected traffic – so you enjoy great results and a longer asphalt lifespan. New paved surfaces also cost half as much as comparable concrete surfaces and have many more maintenance options available to ensure longevity.

Application

Before beginning any paving project, we will work with you to determine your needs – including any critical pre-phase services to prepare your site not just for a new asphalt surface, but also for your entire construction project.

These pre-phase services, including site design and survey, demolition, earthwork or concrete services, prepare your site for the paving process. Then we level and balance the area and apply and smooth the asphalt for your new pavement, readying it for final touches such as parking stall striping, directional lines and arrows, speed bumps, signage and more.

Available Materials & Options

We use innovative asphalt mixes custom-designed to tolerate the harsh conditions of the desert Southwest climate. We can also customize your paving project for a variety of traffic loads and conditions to provide you with optimal performance for an extended product lifespan. Standard options & materials include:

*1/2 Inch Design Mix

*3/4 Inch Mix Design

*Aggregate Base Course

Arizona
