

Asphalt Overlay

Add Years to Your Asphalt

When pavement deteriorates due to lack of maintenance, it can often seem like it's at the end of its lifespan – and you may think you need to demolish and rebuild from scratch. But with an asphalt overlay, you may be able to get more out of your asphalt than you thought possible.

Like a facelift for your pavement, an overlay adds new life to older asphalt, repairing flaws in the existing surface and adding a new layer of pavement to the top – giving it a brand-new appearance for less.

Benefits

Customizable: Choose the right paving thickness for your project type and expected amount of traffic.

Improved Look & Durability: An overlay will give your surface the look of a brand-new asphalt surface, adding as long as 10 to 15 years to your pavement's lifespan.

Better Traction & Safety: Overlays provide improved vehicle traction and reduce safety issues like trips and falls.

Faster Completion: Overlays take much less time to complete – usually just days. This minimizes downtime for your road or parking lot.

Application

Before paving begins, we can repair any distresses in your existing surface, concrete curbing or other structures, and remove any loose material or water from the surface. Our repair services can also include saw cutting, milling and wedging, skin patching and trench repair.

This prepares your site for the paving process, where we apply a new layer of asphalt over the existing pavement, then compact and smooth it. Your surface is now ready for final touches such as parking stall striping, directional lines and arrows, speed bumps, signage and more.

Available Materials & Options

We use innovative asphalt mixes custom-designed to tolerate the harsh conditions of the desert Southwest climate. We can also customize your paving project for a variety of traffic loads and conditions to provide you with optimal performance for an extended product lifespan. Standard options & materials include:

*1/2 Inch Mix Design

*3/8 Inch Mix Design

*SS1H Tack
