

# Earthwork

## Solid, Stable Earthwork and Grading

Preparing the soil for a new construction project may be more complicated than you think. From soil analysis and stabilization to dust control, over-excavation, material support and the various stages of grading, Ace's earthwork team utilizes a wide range of advanced civil engineering tools to ensure you have a balanced, durable foundation for your building project – as well as importing and exporting the soil needed to do the job.

Our approach to earthwork takes more than the finished product in mind. We also employ the latest construction equipment specially designed to perform these tasks efficiently and with minimal environmental impact. We focus on flexibility as well, including night and weekend scheduling or multiple crews, allowing us to accommodate your important timetable.

From new construction to access lanes, you can count on Ace to provide a solid foundation on which to build your masterpiece.

### Solutions

#### Over-Excavation:

A building is only as good as its foundation, and strong foundations are built with stability and compaction. Let Ace Asphalt meet your specified tolerances for density while keeping your project timeline on track or ahead of schedule.

#### Mass Grading:

Ace Asphalt has moved earth in every corner of the Valley and state. Our experience is deep, our capabilities wide and our creative skill in sniffing out potential issues limitless.

#### Import/Export:

Poor balancing by your earthwork contractor is not a good reason for import or export requirements. Let us help you save time and money by doing right the first time.

#### Fine Grading:

No matter the condition when we start, Ace Asphalt will finish your asphalt, concrete, and landscape grades within the tolerances your plan specifies.

#### Soil Stabilization:

No one wants post-construction settlement - least of all you. So when the situation calls for it, we have the right tools at our disposal to combat expansive dirt.

#### Dust Control & Storm Water Pollution Prevention:

We take every precaution to ensure our practices meet and exceed requirements for dust control and SWPP.
