

Concrete

Complete Your Surface With Concrete

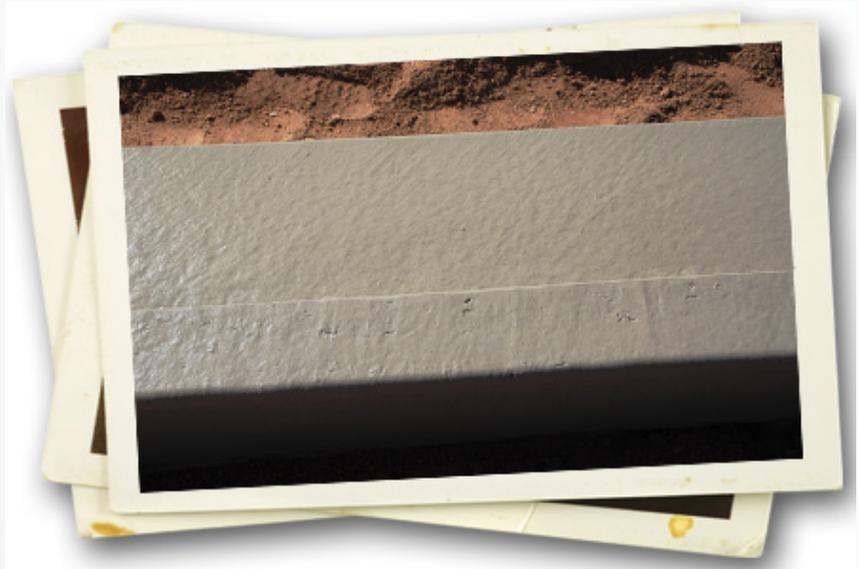

From parking lots and roadways to buildings, concrete is a major player in your site's design – which means it's an element you can't afford to ignore.

Our in-house Concrete Division is ready to construct or repair any site concrete needs your property may have. We specialize in all phases of concrete site work, including slabs and foundations, curbs, drives, sidewalks, access ramps, valley gutters, site wall footings, concrete paving and decorative concrete.

Benefits

Convenience: You'll have one partner for all of your asphalt and concrete needs, eliminating the unnecessary cost and coordination with multiple specialty subcontractors.

Improved Safety: We keep you safer by making manholes, cleanouts, etc. flush with existing surfaces, thus eliminating these tripping hazards.

Application

The use of concrete in parking lot and foundational construction is quite extensive. We'll walk you through the form-and-pour curbing application process to give you a better understanding of what all is involved with this service.

Prior to placing your concrete curbing, we will perform any site design and survey, demolition, and/or earthwork your site may require. Once our survey team has identified and staked the area for curbing, our concrete crew will set the forms to the proper elevation lines. Next, the forms are oiled in preparation for the concrete. Once mixed, the concrete is poured into the forms. Our crew will then tool the joints and edges and broom finish per code. Once the concrete has cured, we will remove the forms. Your site is now ready for any additional phases of work required including new paving, asphalt replacement and striping or curb painting.

Options

- *Building Foundations
- *Access Ramps
- *Valley Gutters
- *Driveway Approaches
- *Dumpster Pads
- *Sidewalks
- *Decorative Concrete
- *Concrete Paving
- *Footings
- *Curbs (extruded and cast-in-place)
